

Climate Justice

What is climate justice?

Climate Justice explores how climate change affects the world's poorest people who are the most vulnerable.

How is it caused?

It is caused by our overuse of fossil fuels in the northern hemisphere, one person in Ireland produces as much Co2 as eighty eight people in Ethiopia.

Who is affected?

Most of the southern hemisphere is affected in countries like Ethiopia, Pakistan, Philippines, Kenya and more.

Why is it an issue?

This an issue because more extreme weather is occurring like Typhoon Haiuan in 2013 and the recent floods in England/Ireland in late December/early January. It is also having an affect on farmers because of droughts and floods.

Is it fair?

It isn't fair because the countries that don't cause it as much as the richer countries are affected more.

What will happen if we do not do something about this?

If we do not act now that will cause southern hemisphere countries to have such extreme weather that they will have to move to the northern hemisphere where the countries will over populate and become crowded.

What can we do?

We can work at home and school to recycle, grow food, plant trees and walk to places.

Do you think we are doing the right thing?.....
