

Climate justice

By Lucy Hughes

What is Climate Justice??

Climate Justice explores the effect Climate Change has on people all around the globe.

What is Climate Change??

Climate Change is when Carbon Dioxide (CO₂) rises into the atmosphere and forms a blanket around the Earth this is called the Greenhouse Effect. Our Earth advanced very slowly in the past, so the Earth could adjust to these changes, although, in recent years, the Earth has been changing very quickly, too quickly for our Earth to process. When Fossil Fuels are burnt, they emit CO₂ into the atmosphere. Most factories use these fossil fuels to power their machines, which leads to the Greenhouse effect becoming thicker and our Earth to become warmer.

How does it affect YOU??

It affects us by changing our weather, in the last few years, Ireland has seen more extreme weather than ever before, storms and dangerously strong winds.

Who is feeling the effects most??

Ireland has been unlucky, but people in the Global South have been even more so. In 2013, Typhoon Haiyan hit The Philippines and thousands of people had to abandon their homes in search of safety.

What can we do??

We can do many things to help with Climate Change, we can leave the car at home, not rely on technology so much, we can even plant trees!

This is our world, it's up to us to save it.

What can YOU do??
